## Data Analysis

Name : Li Machaba

### Exercise 1.01

#### SQL Fundamentals

Database: employees - db

#### 1. Select statement

Sql query **SELECT \***

**FROM employees;**

#### 2. Select distinct statement

Sql query **SELECT distinct(\*) department,**  
**FROM employees;**

#### 3. Order by statement

Sql query **SELECT first and last name As ('first\_name', 'last\_name')**  
**FROM employees,**  
**Order by salary DESC;**

#### 4. Limit statement

Sql query **SELECT employees - salary**  
**FROM employees**  
**order by Salary DESC**  
**Limit 5;**

#### 5. Where statement

Sql query **SELECT distinct**  
**FROM employee**  
**Where department = 'IT';**

6. And statement

SELECT \*

FROM employees

Where department = 'Finance',

AND salary > 58000;

7. OR statement

sql query SELECT 'first-name, last-name'

FROM employees

Where department = 'HR'

OR department = 'Marketing';

8. Not statement

Sql query SELECT

FROM employees

Where Not department = 'IT';

9. In statement

SELECT

FROM employees

Where department IN ('HR', 'IT', 'Finance');

10. Combining statement

SQL query SELECT

FROM employees

WHERE department = 'IT'

AND salary > 50000

AND City = 'New York';

③

11. Combining Where, AND, and ordered by  
sql query: `SELECT first_name As first-name  
AND last_name As last-name  
FROM employees  
Where department = ('IT', 'Marketing'),  
Order by Salary > 52000;`

12. Combining Select Distinct, Where and IN  
sql query:

```
SELECT Distinct(*) cities  
FROM employees  
Where department  
NOT department = 'HR', 'IT';
```

13. Combining Where, Not, AND, and Order by  
sql query:

```
SELECT ('first-name', 'last-name').  
FROM employees  
Where department = Not 'Finance'  
And salary > 50000  
Order by hire-date Asc;
```

14. Combining Where, OR, IN and LIMIT  
Sql query:

```
SELECT employees  
FROM City = 'Chicago' OR 'Los Angeles';  
Where department IN 'IT' OR 'Marketing'  
Limit 1-3;
```
